Tips and Tricks for Using the World Province Boundaries Layer

Our [monthly newsletter](#) and [website](#) have tips and tricks to help users effectively use data. We have included some relevant tips below for your reference.

Downloading the free World Province Boundaries layer for Maptitude

The World Province Boundaries map layer is accessible as a free download. In this tech tip we describe how to install the layer and add it to a map.

1. Download the data from the [Caliper Store](#). NOTE, you must have the most recent version of Maptitude in order to download the layer.
2. Once the files are downloaded, click **OK**, and then click the **Install** button. Follow the prompts to install the layers. The default is to overwrite the existing ccWorldLandMass.cdf (e.g., in c:\ccdata).
3. To add the layer to a Maptitude map, open the map, choose **Map>Layers** or click  on the Standard toolbar, and click **Add Layer** in the Layers dialog box.
4. Browse for the folder where the downloaded data are located (e.g., c:\ccdata). Choose the layer from this folder and click **Open** in the File Open dialog box.
5. Maptitude adds the layer to the map. Close the layers dialog box to see the layer on the map. Note, you may have to zoom in or turn off autoscaling if your map scale is outside of the autoscale settings for the layer you chose. You can turn off autoscaling in the Display Manager by right-clicking on a layer and choosing **Show Layer** or by clicking the red magnifying glass icon next to the layer.

Creating Territories using the World Province Boundaries Layer

1. Perform the steps in: <https://www.caliper.com/learning/articles/how-can-i-create-worldwide-territories/>
2. To track **population** as you create and edit territories, perform the steps in: <https://www.caliper.com/learning/articles/how-do-i-add-tracking-fields-to-my-territories/> using **Add Geography Layer Fields** with "Population" as a Tracking Field.
